

## Backends contd

### AzureRm Backend

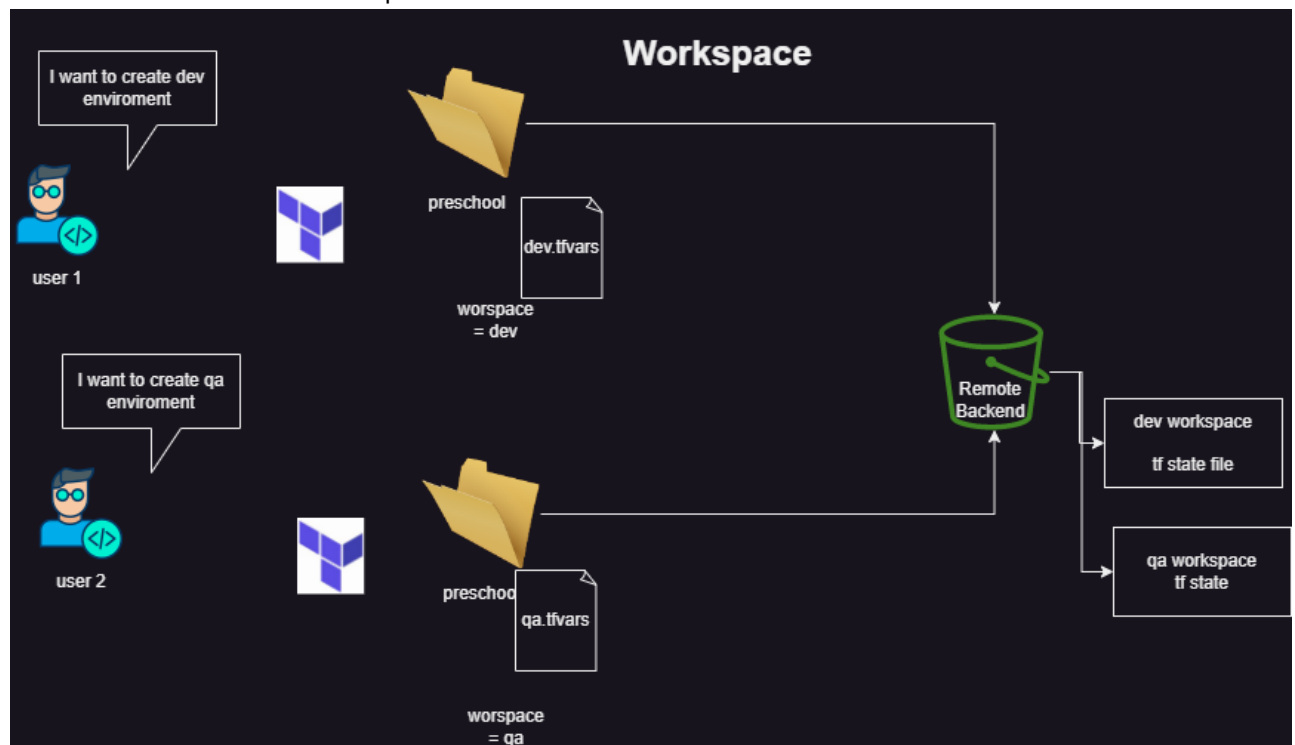

- [Refer Here](#) for azurerm backend
- Azurerm stores the state in storageaccount
- creating a storage account and container (refer classroom video)
- [Refer Here](#) for changes

## Terraform workspaces

- Idea behind using terraform template is to reuse the template across various environments without much changes
- Terraform behavior with only backend

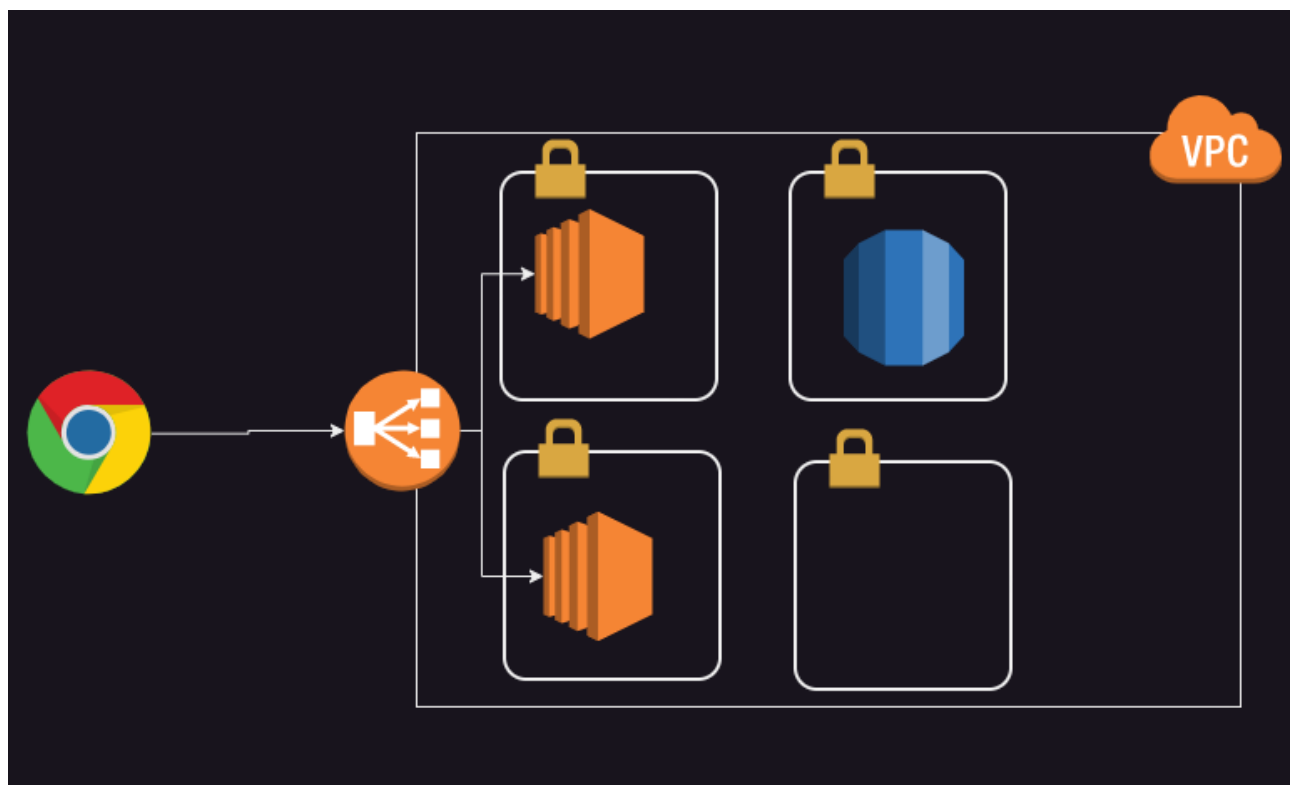

- Terraform behavior with workspaces and backend

- [Refer Here](#) for official docs
- [Refer Here](#) for books

## Scenario

- Ntier in AWS

- Ntier in AZure
