Git Hooks
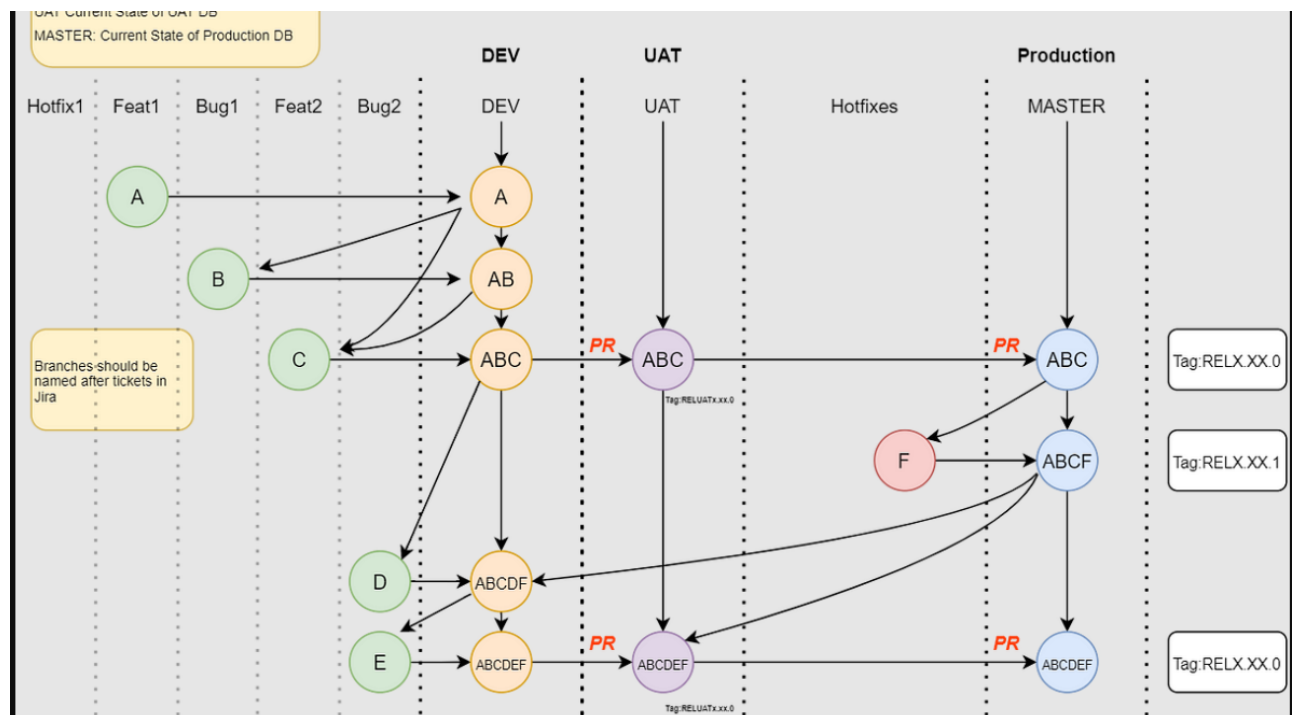

- Refer Here for article on githooks
- Githooks are the way to execute addtional scripts on events on git
- In Git we have two types of hooks
  - client side: They execute on local repo
  - server side: They execute on remote repo

GitHub Webhooks

- Webhooks are the way to run server side hooks on cloud hosted git providers
- Github has taken this one step further and created Github actions where we can build whole ci/cd pipeline
- Refer Here for github webhooks

Branching strategies

- Git Flow Refer Here
- GitLab:

Fifth area of git => git stash

- Refer Here
